

# Software

## What Software Is On The School Provided Computers?

Each computer comes equipped with the programs necessary to complete school work pre-installed. You can view the [list of Pre-installed Software](#) maintained on a Google Spreadsheet.

We recognize the need to install additional software based on a students grade level, course load, and special education requirements. This software, although not pre-installed, can be installed by the families with a call to the Technology Helpline. The technicians will be able to help you install only the [Approved Software](#) based on the child's special needs.

Please see [What Is The Tech Support Helpline Number?](#)

### NOTES:

- All ISP software and/or drivers are considered "approved". If you need to install some software to connect the school provided computer to the Internet, you should call the Technology Helpline.
- Due to the fact that K12 Inc provided software is grade specific, it is not pre-installed. The K12 Inc provided software is approved, and you will need to call the the Helpline to install.
