

Chrome Extensions

How Do Enable/Disable/Remove Chrome Extensions?

To begin managing extensions, click on the menu button  in the upper right corner, and then "**More Tools --> Extensions**" (Optionally, you can type `chrome://extensions/` into your address bar.) You will be able to see a list of all extensions added to your profile of Chrome.

Each extension listing will have a trash can  or a building  on the far right. Those extensions with a building are installed by PA Virtual. These are the extensions that we 'push down' to you.

- **Modify Settings:** If the extension has options/settings, you will find a link to modify those settings on the left, under the description.
- **Disable/Enable:** If the extension can be turned off/disabled, you will be able to uncheck the box beside "**Enabled**" in the center. (Some extensions are enabled/disabled by PA Virtual and will be 'greyed out')
- **To Remove:** If you installed the extension, you can remove it by clicking on the trash can  on the far left. If PA Virtual installed the extension, you will see the building icon .

Unique solution ID: #1073
