## How Do I Allow Pop-Ups?

One of the best ways to make sure your browser works with all PA Virtual sites and resources is to make sure you are logged in. See [How Do I Sign Into Chrome?](#) for directions.

For sites that may not be defined via our system wide policy, you can follow standard Chrome directions to allow pop-ups from specific sites:

- Go to the **PopUps Settings** area of Chrome. This can be done in one of two ways:
  1. You can type (or copy/paste) into your chrome addressbar: `chrome://settings/content/popups`
  2. Click the following:
    - a. Click the Chrome menu on the browser toolbar, and select "**Settings**".
    - b. Click "**Advanced**" at the bottom of the page to see the advance settings.
    - c. In the **Privacy and security** section, click the **Content settings** button.
    - d. Next click on the "**Popups**" section.
- Now click on **ADD** in the Allow section to allow pop-ups from a specific address.

In the window that opens, you can follow the given example for how to add a website to your list of sites allowed to show popups.
